PERSONAL STATEMENT

Motivated Computer Science and Engineering student with a strong interest in Artificial Intelligence, Data Science, Data Analytics, and Brain-Computer Interfaces (BCIs). My research interests lie at the intersection of AI, data-driven methods, neural signal processing, and intelligent healthcare, with a particular focus on EEG-based motor imagery and neurorehabilitation. I am interested in extracting meaningful insights from complex biomedical and multimodal datasets through data preprocessing, feature engineering, statistical analysis, machine learning, deep learning, and data visualization.

My current research focuses on EEG-based motor imagery, neural signal analysis, healthy-like EEG reconstruction, generative AI, and AI-assisted digital neural bypass systems for post-stroke motor rehabilitation. I have experience with CNN, LSTM, generative models, EEG signal processing, machine learning, data analysis, and research-oriented computational projects. Seeking a research-focused Master's programme to advance my expertise in AI, Data Science, Data Analytics, and neural engineering while contributing to intelligent healthcare and AI-driven rehabilitation research.
